

PRINCIPAL INVESTIGATOR

Summary

We are always on the lookout for Principal Investigators to lead our research agenda in various programmatic areas, including livelihoods, education, agri-business, health economics, and more. As a PI, you get to play a key role in the conception and design of rigorous studies that we undertake. In addition, you guide the implementation and monitoring of the same.

Key Responsibilities:

- Lead the design and implementation of research studies within the scope of Apatana Insights' focus programmatic areas ensuring quality and timely delivery of outputs.
- Initiate and follow up fundraising efforts towards new and existing research projects.
- Provide technical leadership and assistance on implementation of research projects ensuring methodological rigour and compliance.
- Contribute to publishing study results in reputable journals, disseminating findings to academic and professional communities.
- Engage collaboratively with stakeholders and programme staff to align research activities with organizational priorities.
- Provide technical oversight and mentorship to other research staff in the organisation.

Qualifications:

- Advanced degree (PhD preferred) in relevant fields such as Economics, Statistics, Public Health, Agriculture, Data Science, Education, or related disciplines.
- Experience leading one or more of the following: Experimental design impact evaluations, implementation research and large-scale survey data collection.
- Experience publishing in reputable peer reviewed journals.
- High level of Proficiency in conducting advanced level quantitative and qualitative statistical analysis and modelling using applications including STATA, R, Python, etcetera.
- Experience leading and mentoring junior research staff.
